

# Impulse HAND SEALERS

## *KF-Series*

Impulse hand sealers seal poly bags and other thermoplastic materials quickly and efficiently without any warm-up time. Depending on the model of the machine, material up to 16" wide and 10mil total thickness can be sealed. The sealers are equipped with a plug-in electronic timer which controls the different sealing times needed for different materials' varying thickness. The timer automatically beeps when the seal is done. Once the timer is set, the sealer will give a consistently flat seal. It is recommended that the user hold the seal bar down for a few seconds more after the light goes out to ensure enough time for the seal to cool and set.
